

NexGEN Hydrographics Basecoat System is an Industrial Coating that gives our customers an advantage on processing parts with extreme speed with low cost of supplies. This type of paint is used in many different fields which include automotive, heavy truck, household decoration and commercial vehicles. With the increased wear capability and enhanced UV protection, you can't go wrong with this line. This new Industrial Line gives our processors all the tools needed to complete projects with many different substrates, all from one product line!

Advantages:

Dip in 5 Minutes with no Baking required (In most regions)

Options for Substrates – All available with standard OHG Colors or nearly any Custom Paint Code

Direct to Metal Series

Direct to Plastics Series

Direct to Glass Series

Standard Basecoat Series

Direct to Metal Series – Anticorrosive and great chemical resistance. Adhesion to Galvanized Metals, Steel, Stainless Steel and Aluminum. Only prep required is degreasing the surface.

Direct to Plastic Series – Designed for direct adhesion to most plastics including PP, ABS, LDPE, HDPE (Flame treating still recommended on HDPE), and most methacrylate surfaces.

Direct to Glass – Designed for direct adhesion to Glass

Standard Basecoat – Our Basecoat line is designed to be applied over primed surfaces. This is the standard type of Primer/Basecoat/ClearCoat system that is widely used today. This series can be dipped in as quickly as 5 minutes after spraying
